HARD SKILLS

- General engineering
- Materials engineering
- Aerospace engineering
- Metallurgy
- Maths / Physics
- Softwares: CADs, Labview, Jira, Office
- Coding in ADA, C, Assembly & more
- Experimental design / analysis
- Electronic microscopy
- Reflectance spectroscopy
- Geochemistry

SOFT SKILLS

- Problem-solving mindset
- Fast learner
- Open-minded
- Team player
- Rigorous and responsible
- Startup, cross-cultural, and multidisciplinary environments

HOBBIES

- Reading
- Piano & Guitar
- Cinema
- Programmation
- Skiing
- Hiking

LANGUAGES

- Franch (native)
- English (Advanced – IELTS C1 level)
- Spanish (Intermediate)
- Japanese and Russian (basic level)

CAREER

Planetologist 08/2024 - 09/2024

Center for Petrographic and Geochemical Research (CRPG) - Nancy -
Internship

- Programming in IDL of a lunar mineral classification algorithm for a confidential lunar rover mission in collaboration with CNES.
- Included as second co-author in a scientific proceeding thanks to this algorithm.
- I gained knowledge in lunar geology and spectral measurement by working with a team of planetologists to analyse lunar, martian, and meteoritic rocks.

Materials engineer 03/2024 - 05/2024

OffWorld Europe - Luxembourg - Internship

- Integration in a multidisciplinary team of engineers with 10+ nationalities.
- Materials selection for lunar missions based on thermal, mechanical, chemical and radiation behaviour of metal alloys and polymers.
- Experimental work on a low-pressure TRL3 microwave system to extract and condense volatile substances from lunar regolith simulants LHS-1 and LSP.
- Sourcing of TRL4 subsystems: hopper, microwave cavity, condenser, and heat recovery unit.
- Collaboration with ESA: experiments, analysis, and documentation on microwave recycling of organic matter into biochar.

Research intern in metallurgy 06/2023 - 09/2023

Institut Jean Lamour - Nancy - Internship

- Project: separate and recycle elements in the aerospace alloy Inconel-100 through dissolution in liquid zinc and magnesium.
- Daily use of electron microscopy (SEM), sample preparation, formulation and presentation of hypotheses about phase evolutions and microstructure changes in the mixture.

EDUCATION

Engineering Degree 09/2021 - 09/2024

École des Mines de Nancy

Department of Materials Science and Engineering

Ranked as the 5th best engineering school in France. General courses on physics and engineering, and advanced specialisation in metallurgy and materials science.

Preparatory Classes for the Grandes Écoles 09/2019 - 06/2021

Mathematics/Physics (MP) classes at CIV Valbonne

The "Preparatory Classes" system is known for its intensity. I was the top student in my class, and learned how to rigorously understand and solve complex physics and mathematics problems.

PROJECTS AND ASSOCIATIONS

Projects at Mines de Nancy

- Online course in project management
- **Second-year project:** Team design of a cloud chamber using 3D printing and laser tools, demonstration of particle detection in a lecture hall.
- **First-year project:** Team design of a connected shelter for Boston Dynamics' SPOT robot dog, utilising machine learning.

Associations

- **Science & Mines:** Writing articles on nuclear fusion for Mines students and interviewing nuclear physicists.
- **Astronomines:** Financial support activities for this astronomy club.
