HARD SKILLS

- Git & Github
- VS Code
- Github Copilot
- Linux environment
- Electron apps
- Docker
- Machine learning
- Data analysis
- Jira & MS Office
- Low-level & shells
Assembly, C, Bash, Powershell
- Web skills
Full-stack, React, NodeJS, Express, TypeScript, SQLite (all certified), Vite, Vitest & Playright (Tests), Railway (CD)
- Other languages
ADA, Scala (both certified), Python, Matlab, Caml, R.

SOFT SKILLS

- Problem-solving mindset
- Fast learner
- Open-minded
- Team player
- Rigorous and responsible
- Startup, cross-cultural, and multidisciplinary environments

HOBBIES

- Reading
- Piano & Guitar
- Cinema
- Programmation
- Skiing
- Hiking

LANGUAGES

- Franch (native)
- English (Advanced – IELTS C1 level)

CAREER

Mathematics expert for LLM training

12/2024 - current

Scale AI

- Writing, solving, and correcting original math problems at the undergrad level in statistics, probability, linear algebra, analysis, and geometry.
- Goal: train state-of-the-art large language models (LLMs) with reinforcement learning by human feedback (RLHF).
- During this time, I independently obtained certifications in software development including Full-stack dev (React, Express, NodeJS, TypeScript), safe languages like ADA and Scala, while also learning Assembly, C, and OS theory.
- Put those skills in practice by deploying a personnel website featuring computer science projects, using git, continuous deployment, Playright for testing.

Software engineer

08/2024 - 09/2024

Center for Petrographic and Geochemical Research (CRPG) - Nancy - Internship

- Creation of a spectral camera simulator and lunar mineral classification program for a confidential lunar rover mission of the French Space Agency CNES.
- Included as second co-author in a scientific proceeding thanks to my algorithm.
- Self-taught in the "IDL" programming language.
- Collection of spectral data from lunar, martian, and meteoritic rock samples.

Materials and Software engineer

03/2024 - 06/2024

OffWorld Europe - Luxembourg - Internship

- Integration in a multidisciplinary team of engineers with 10+ nationalities.
- Creation of an image analysis program in Python in the context of biological experiments for the European Space Agency (ESA).
- Experimental work using LabView on a low-pressure TRL3 microwave system to extract and condense volatile substances from lunar regolith simulants.
- Materials selection for lunar missions based on thermal, mechanical, chemical and radiation behaviour of metal alloys and polymers.

EDUCATION

Engineering Degree

09/2021 - 09/2024

École des Mines de Nancy

Ranked as the 5th best engineering school in France. Included courses on algorithms, data structures, machine learning in Python, PCA and data analysis in R, video game conception, 3D modelling and printing, and multiscale modelling.

Preparatory Classes for the Grandes Écoles

09/2019 - 06/2021

Mathematics/Physics (MP) classes at CIV Valbonne

The "Preparatory Classes" system is known for its intensity. I was the top student in my class, and learned how to rigorously understand and solve complex physics and mathematics problems. Additional specialization in computer science.

PROJECTS AND ASSOCIATIONS

Projects at Mines de Nancy

- Online course in project management
- **Second-year project:** Team design of a cloud chamber using 3D printing and laser tools, demonstration of particle detection in a lecture hall.
- **First-year project:** Team design of a connected shelter for Boston Dynamics' SPOT robot dog, utilising machine learning.

Associations

- **Science & Mines:** Writing articles on nuclear fusion for Mines students and interviewing nuclear physicists.
- **Astronomines:** Financial support activities for this astronomy club.
